**DETAILED ACTION*****Double Patenting***

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the “right to exclude” granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 14-29 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-11 of U.S. Patent No. 7,188,789. Although the conflicting claims are not identical, they are not patentably distinct from each other because they both claim an atomizer nozzle comprising a nozzle body with spray-discharge orifices, at least one metering aperture, elevation steps and at least one nozzle body insert with at least one flow-through opening. The claims of the instant invention are broader in scope than claims 1-11 of U.S. Patent No. 7,188,789, and are therefore encompassed in claims 1-11 of U.S. Patent No. 7,188,789.

***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 14-16, 18-21, 28 and 29 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Peter-Hoblyn et al.

Peter-Hoblyn et al discloses an atomizer nozzle comprising all the featured elements of the instant invention, see Figures 4, 4a and 5.

***Claim Rejections - 35 USC § 103***

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 22 and 25-27 are rejected under 35 U.S.C. 103(a) as being unpatentable over Peter-Hoblyn et al.

Peter-Hoblyn et al discloses an atomizer nozzle comprising all the featured elements of the instant invention, except for the nozzle body insert having a rectangular cross-section and flow-through opening having one of a rectangular and trapezoidal cross-section, at least two uniform cross-sections of different size and at least two uniform cross-sections of different size corresponding to a stepped bore hole. It would have been obvious to one having ordinary skill in

the art at the time the invention was made to provide the cross-sections as claimed as a matter of obvious design choice depending on the particular of the shape of the nozzle body desired and the amount of flow desired through the nozzle body insert.

***Conclusion***

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Byles, Iwanowski, Arnold et al, Cerasi and Grzych show various spray nozzles with radial spray.
